

Basis of Education and what it means to be
Educated

Education is the process in which
someone acquires habits, values, and
knowledge.

“An education isn’t how much you
have committed to memory, or even
how much you know. It’s being able
to differentiate between what you
know and what you don’t”. - Anatole
France
1844-1924

Basic Education around the World

All around the world different countries teach their children different things, but the basics should be taught all around the world. This means things like language, mathematics, writing, and brain stimulating activities. This including things like jigsaw puzzles, chess, etc. Students in countries around the world, mainly third world countries, should have equal opportunities as students in first world countries. No one should be limited by their place of residence.

Other countries and their environment

Schools all around the world are all different in the ways they teach, what they teach and the environments the students and teachers are in. The environment is one of the key factors in how students can learn and teachers can teach. If their environment is not suitable it will make it harder for students to learn. But, then there are also those countries without any form of education

How we can help?

We can help people in other countries by donating a little bit of our money to charities and organizations that are trying to bring education to every part of the world, such as the **Bill and Melinda Gates Foundation**, which supports initiatives such as education, world health, and community.

REASONS FOR EQUAL EDUCATION AROUND THE WORLD

1. Everyone in the world should be treated equally no matter gender, race or religion.
2. Everyone should have the equal chance of learning and becoming successful
3. Without education there wouldn't be advances in the world, so we should try to teach as much people as we can so that there is a higher likelihood of breakthroughs in scientific fields and other different fields.
